Rhythm Instrument Patterns

Auditory Center

The students will use varies rhythm instruments to create, describe, extend, and record patterns.

Example: bells, tambourine, sticks, bells, tambourine, sticks, etc.

Individual students or small groups of students will plan a pattern using rhythm instruments and then do the pattern with their back to the rest of the group of students. Then the students listening to the pattern determine the type of pattern and record the pattern on paper using different colors or different symbols for each sound. Then each individual will extend the pattern on their own paper.
