

Name: Linda Johnson

Grade Level/Subject: 9th Grade Alt. Ed. Math

Topic: Comprehensive of Word Problems

Objectives (P.A.S.S.): Process Standard 4: Connections 1, 3, & 4

Instruction: Solving multiplication, addition, and subtraction story problems.

Instructional Process: They have been doing Menu Math. They use a menu like you have in a restaurant to work some of the problems. They really liked doing these problems.

Closure: Math requires you to THINK, over the summer the lower level students seem to forget what they learned last year. Each time you start a new lesson you have to explain what they need to do. They are starting to do better now that we have been in school for almost nine weeks.

Assessment: They are really doing a lot better now that we have been working for eight week. It is like they have forgotten all of the math that they have had the last eight years.

Modifications/Accommodations: I am using things that I think will help get them ready for Alg. I next year.

Reflection: My students have really enjoyed doing this unit. It is a little bit different way to get them to do word problems. They had a little bit of trouble getting started but they are understanding how to do them now.

Solving division story problems.

Solve the story problems without the menu.

-
1. The bill for hamburgers and colas came to \$66.00. Twelve people shared the cost equally. How much did each person pay? _____
 2. Pie and coffee for members of the Ladies' Club was \$86.40. The 27 members shared the cost equally. What amount did each lady owe? _____
